NZC Roadmarking

This programme is recognised as a New Zealand Apprenticeship when it is completed with the optional strand in Testing.

This course is designed for people to learn the skills needed to help New Zealand navigate our roads.

WHAT YOU'LL LEARN

- Applying health, safety, and environmental management procedures to meet compliance requirements.
- Planning, coordinating and carrying out roadmarking work tasks to meet contract specifications.
- A skilled operator will be able to carry out both remark and new work using an A-type or B-type applicator.
- Supervising a roadmarking team to complete daily work activities on a roadmarking site, to meet contract specifications.

Graduates of the Testing strand will also be able to certify roadmarking applicators to ensure compliance with industry standards.

HOW THE COURSE IS DELIVERED

This programme is assessed on-job and is completed through workbooks. It can also be achieved through Advanced Portfolio Assessment (APA). If the learner has a minimum of 4 years experience working in the industry, and can provide a portfolio of evidence from the past 24 months linking to the level of this programme's unit standards, then APA could be a great option to recognise existing skills.

ENTRY REQUIREMENTS

The learner must be employed in the roadmarking industry and exposed to the relevant skills covered to gain this qualification. It is recommended the learner complete the NZC in Roadmarking (Level 3) before being signed up to this qualification.

TRAINING PATHWAYS

Graduates of this qualification can work as Senior Roadmarking Operators. Graduates of the optional strand, once registered, can operate as Testing Officers with the NZ Roadmarkers Federation Inc. This qualification can also lead to the NZ Certificate in Infrastructure Works Contract Management (Level 5).

Programme Structure

The structure of this programme features four compulsory modules, with one module having elective options, as well as a specialised strand option.

Module 1
Describe and manage health, safety, and environmental requirements in roadmarking
Take control of an emergency at an infrastructure worksite
Conduct and document infrastructure worksite health and safety meetings
Identify and liaise with people affected by activities at an infrastructure works site
Module 2
Perform complex industry calculations for roadmarking application
Demonstrate knowledge of specifications used for complex roadmarking
Demonstrate knowledge of and carry out infrastructure works quality assurance requirements
Module 3
Set-out complex roadmarking work
Demonstrate knowledge of paint application equipment, troubleshooting, and carry out repairs on a roadmarking site
Choose one from the following Unit Standard
Undertake and supervise new roadmarking work using an A-type applicator
Undertake and supervise new roadmarking work using a B-type applicator
Module 4
Supervise daily activities on an infrastructure worksite
Demonstrate and apply knowledge of team-building skills
Interpret and communicate daily operational requirements on a civil infrastructure worksite
Testing Optional Strand
Test and evaluate roadmarking paint applicators
