MC *CCTV Inspection of Water Services Assets*

This micro-credential (MC) is for people who inspect and maintain pipe systems, pumping systems, and components that contribute to collecting and disposing of wastewater and stormwater.

This course is designed to provide the infrastructure industry with people who can use CCTV to inspect non-pressure water services assets.

WHAT YOU'LL LEARN

This MC covers the operational knowledge and skills required to use closed-circuit television (CCTV) to inspect and report on non-pressure water services assets, that include the following:

- The role of CCTV in the management of non pressure water services assets.
- Procedures for survey of assets, including how to prepare assets.
- Safe practice, selection and set up of CCTV equipment.
- Inspection of non-pressure water services assets.
- Identification of pipe defects and features.
- Recording of information from CCTV inspection.

HOW THE COURSE IS DELIVERED

MCs are short, NZQA-recognised training programmes with fewer credits than a qualification (between 5 and 40). They either lead into a qualification or focus on specialised skills and knowledge, that top up a full qualification certificate, or apprenticeship programme. It takes around 2 months to complete this programme. Achievement is through on-job assessment and is completed through workbooks.

ENTRY REQUIREMENTS

The learner must be employed and be exposed to the relevant skills covered.

TRAINING PATHWAYS

Graduates who hold this MC will have the proven skills and knowledge to:

- Carry out the best and safest practice when selecting and setting up CCTV equipment
- Describe the role of CCTV in the management of non-pressure water services assets
- Identify pipe defects and features, and inspect and record information from the inspections.
