MC *Forestry Earthworks*

This course is designed for people who work with trenchless technology to install pipe systems.

This micro-credential (MC) is designed to provide the infrastructure industry with people who can operate a drill rig and provide tracking for horizontal directional drilling (HDD).

WHAT YOU'LL LEARN

This MC covers the operational knowledge and skills required to operate a drill rig and provide tracking for HDD that include the following:

- The role of HDD in pipe installation
- Procedures for the HDD
- Drill rig maintenance
- Carrying out a pilot bore
- Drill rig operation
- Preparing for tracking and tracking bore paths
- Recording as-built data

HOW THE COURSE IS DELIVERED

MCs are short, NZQA-recognised training programmes with fewer credits than a qualification (between 5 and 40). They either lead to a qualification or focus on specialised skills and knowledge, that top up a full qualification certificate, or apprenticeship programme. It takes around 6 months to complete this programme. Achievement is through on-job assessment and is completed through workbooks.

ENTRY REQUIREMENTS

The learner must be employed and be exposed to the skills covered.

TRAINING PATHWAYS

Graduates who hold this MC will have the proven skills and knowledge to operate a drill rig and provide tracking for HDD.
